

ACCESS™ selects Tjat Messaging Widget to showcase the power of the NetFront™ Widgets Platform

Tjat's complex Messaging Widget is selected by ACCESS to be part of the widgets available to the NetFront Widgets platform, showing that widgets can range from simple weather widgets to Tjat's rich, interactive Messaging Widget.

The Tjat offering enables access to web messaging services such as Instant Messaging for all devices supporting the NetFront Widgets platform, realizing the promise of widgets for true "Write-Once, Run Many" development cycles with rich, compelling user experience for subscribers and a range of mobile and non mobile devices.

Please Join us during the Mobile World Congress in Barcelona for a live demo of Tjat's groundbreaking Mobile Messaging Widget as an ACCESS™ reference demo for the NetFront™ Widgets platform, at the ACCESS™ demo booth, CY10 (3-0 Courtyard)

A Comprehensive Mobile Widget Platform for NetFront™ Browser, the World's Browsing Standard

NetFront Widgets enables the creation of an Internet widget ecosystem that includes content providers, device manufacturers and service providers through which service providers can deliver high value Web 2.0 services to their customers.

NetFront Widgets provides widget contents through the NetFront Widgets community site and can be usable on mobile phones (WM, S60, ALP & BREW), digital TVs, set-top boxes, mobile handhels, game consoles, automobile navigation systems and many other types of products.
